BIAC-OECD Green Economy Dialogue
Paris, November 6, 2012

International Business
Green Economies Dialogue (GED)

Dr. Brian P. Flannery
Chair, Green Economies Dialogue Project

Norine Kennedy
Vice President Environment and Energy, USCIB
Green Economies Dialogues: Objectives

• Create a pro-active forum to engage governments, business and thought leaders in the lead up to Rio+20

• Improve awareness and understanding of business views, experience and suggestions for promoting a greener economy, green growth, technologies and jobs… especially through international actions

• Encourage approaches that work to stimulate economic growth while greening activities and outcomes
Green Ecosystems Dialogues Overview

- **Green Dialogue Meetings**: (Hosted by national associations, reflecting national circumstances, priorities)
  
  - Washington (USCIB/RFF, October 11-12, 2011)
  - Paris (BIAC/OECD November 14, 2011)
  - Beijing (March 21, 2012)
  - Tokyo (Keidanren, April 4, 2012)
  - Brasilia (CNI, April 16, 2012)
  - *Events at US, Japan Pavilions at Rio +20*

- **Green Perspective Papers**: Academic, peer-reviewed papers providing perspectives on Green Growth (to be published *Energy Economics*, 2012)

- **Future activities**: Stock taking Fall 2012 – Q1 2013 and consideration of whether/how to continue
Green Economies Dialogues: Themes

Green Economy and...

- Jobs
- Development
- Innovation
- Investment
- Energy
- Trade
- Metrics and indicators

Similar themes, different dialogues in each country
Observations from the Dialogues

- Greening is a process, not an outcome, understanding and challenges evolve over time
- Effective policies must align with national priorities and circumstances, and function effectively in globalized markets
- Green economy policies to mobilize sustained business effort require sound enabling frameworks that promote investment and innovation and account for “green” externalities
- Greening requires economic growth; skepticism that all green proposals inevitably induce growth
- Progress must involve the entire economy including all sectors and across supply and value chains
- Business will be the primary source of innovation and global deployment of advanced technology, finance, and know-how to address challenges
- Need for enhanced business engagement in international policy debate
